

Definition of Done

As a team, before classifying that an item in the sprint backlog is Done, we all agree that the task must meet the following criteria:

- Code must follow this team's defined [☰ Readra - Coding Style Guidelines](#)
- The item must meet the acceptance criteria (this is defined in the sprint backlog)
- Code must be tested prior to making a pull request
- Two other team members (who have not worked on the backlog item) must test and verify that item meets the defined acceptance criteria
- All merge conflicts must be resolved by a developer who is not the feature developer.
